GREATUNIHACK · AGENTS THAT KEEP WORKING WHEN COMMUNICATION FAILS

MiniClaw Swarm

Many AI agents, one shared goal, and no stop when a connection breaks.

HOW IT WORKS

1 · Plan

The Lead turns the goal into stories in the Backlog.

2 · Claim

Agents claim stories for their role and hold them with a lease.

3 · Link drops

The agent keeps working and queues its result. The lease expires and another agent takes over.

4 · Reconnect

The queue replays. A late result is ignored, so nothing is done twice.

What we built

A swarm of Codex and Claude agents with a Lead you chat to, a live issue Board and an agent status page.

Why it is useful

Most multi-agent setups stall when one agent stops answering. Ours routes around it.

Value and impact

Long jobs finish without babysitting, even across restarts, and every decision stays on the Board.

Built on MiniClaw · runs on your own machine with your Codex and Claude sign-ins · agents work in a sandbox
